in this compelling whodunnit elaine dewar reads the science follows the money and connects the geopolitical interests to the spin when the first tv newscast described a sars like flu affecting a distant chinese metropolis investigative journalist elaine dewar started asking questions was sars cov 2 something that came from nature as leading scientists insisted or did it come from a lab and what role might controversial experiments have played in its development why was wuhan the pandemic s ground zero and why on the other side of the atlantic had two researchers been marched out of a lab in winnipeg by the rcmp why were governments so slow to respond to the emerging pandemic and why now is the government of china refusing to cooperate with the world health organization and who or what is drastic locked down in toronto with the world at a standstill

the main intention of this book is to bring together contributions from biology cognitive science and the humanities for a joint exploration of some of the main contemporary notions dealing with the understanding of origins in life mind and society the question of origin is inseparable from a web of hypotheses that both shape and explain us although origin invites examination it always seems to elude our grasp notions have always been produced to interpret the genesis of life mind and the social order and these notions have all remained unstable in the face of theoretical and empirical challenges in any given period the central ideas on origin have had a mutual resonance frequently overlooked by specialists engaged in their own particular fields as a consequence this book should be of interest to a wide audience in particular for all those engaged in the social sciences and the philosophy of science it is unique document since bridges to the natural sciences in a mutually illuminating way are hard to find whether as a primary source or as inspirational reading we feel this book has a place in every library the material comes from an international meeting held in september 13 16 1987 at stanford university organized by f varela and j p dupuy at the request of the program of interdisciplinary research of stanford university we are grateful to rene girard the program director for making it possible with the help of the mellon foundation
